## CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references .....	7
3 Terms and definitions .....	7
4 Test conditions .....	10
5 Clamping of the suspension part .....	10
5.1 General.....	10
5.2 Destructive measurement.....	10
5.3 Non-destructive measurement.....	10
5.4 Clamping position.....	10
5.5 Guiding the inner clamping part.....	11
5.6 Reporting the clamping condition.....	11
6 Methods of measurement .....	11
6.1 Static measurement.....	11
6.2 Quasi-static measurement.....	11
6.3 Incremental dynamic measurement .....	11
6.4 Full dynamic measurement.....	11
7 Static displacement $x_{\text{static}}(F_{\text{dc}})$ .....	12
7.1 Characteristic to be specified .....	12
7.2 Method of measurement .....	12
7.2.1 General .....	12
7.2.2 Test equipment.....	12
7.2.3 Procedure.....	12
7.2.4 Presentation of results.....	13
8 Static stiffness $K_{\text{static}}(x_{\text{static}})$ .....	13
8.1 Characteristic to be specified .....	13
8.2 Method of measurement .....	13
8.3 Presentation of results .....	13
9 Lowest cone resonance frequency, $f_0$ .....	13
9.1 Characteristic to be specified .....	13
9.2 Method of measurement .....	14
9.2.1 General .....	14
9.2.2 Test equipment.....	14
9.2.3 Procedure.....	14
9.2.4 Presentation of results.....	15
10 Dynamic stiffness $K(x_{\text{ac}})$ .....	15
10.1 Characteristic to be specified .....	15
10.2 Method of measurement .....	15
10.2.1 General .....	15
10.2.2 Test equipment.....	15
10.2.3 Procedure.....	16
10.2.4 Presentation of results.....	17
11 Coefficients of the power series expansion of $K(x)$ .....	17
11.1 Characteristics to be specified.....	17

11.2	Presentation of results .....	17
12	Effective stiffness $K_{\text{eff}}(x_{\text{peak}})$ .....	17
12.1	Characteristic to be specified .....	17
12.2	Method of measurement .....	17
12.3	Presentation of results .....	18
13	Mechanical resistance $R$ .....	18
13.1	Characteristic to be specified .....	18
13.2	Method of measurement .....	18
13.3	Presentation of results .....	18
	Bibliography.....	19
	Figure 1 – Measurement of static displacement .....	12
	Figure 2 – Measurement of lowest cone resonance $f_0$ .....	14
	Figure 3 – Pneumatic excitation of the suspension part.....	16
	Figure 4 – Magnitude response of the normalized transfer function, $H(f)/H(0)$ , versus frequency, $f$ .....	17

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

**SOUND SYSTEM EQUIPMENT –  
ELECTROACOUSTICAL TRANSDUCERS –  
MEASUREMENT OF SUSPENSION PARTS****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62459 has been prepared by IEC technical committee 100: Audio, video and multimedia systems and equipment.

This first edition cancels and replaces the IEC/PAS 62459 published in 2006. It constitutes a technical revision. The main changes are listed below:

- descriptions of the methods of measurement are adjusted to the state of the technology;
- addition of Clauses 5 to 13;
- integration of Annex A “Code of practice” at the main part of the standard;
- overall textual review.

The text of this standard is based on the following documents:

FDIS	Report on voting
100/1625/FDIS	100/1648/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the maintenance result date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The “colour inside” logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this publication using a colour printer.**

## INTRODUCTION

The properties of the suspension parts such as spiders and surrounds have a significant influence on the final sound quality of the loudspeaker. This International Standard defines measurement methods and parameters required for development and quality-assurance by suspension-part manufacturers and loudspeaker manufacturers.

Static and dynamic methods have been developed for measuring the suspension parts at small and high amplitudes. Due to the visco-elastic properties of the suspension material (fabric, rubber, foam, paper) the measurement results depend on the measurement conditions and are not comparable between different methods. For example, the properties measured by static method significantly deviate from the dynamic behaviour of the suspension material when excited by an audio signal. This standard defines the terminology, the characteristics which should be specified and the way the results should be reported. The goal is to improve the reproducibility of the measurement, to simplify the interpretation of the results and to support the communication between manufacturers of suspension parts and complete drive units.

## **SOUND SYSTEM EQUIPMENT – ELECTROACOUSTICAL TRANSDUCERS – MEASUREMENT OF SUSPENSION PARTS**

### **1 Scope**

This International Standard applies to the suspension parts of electroacoustic transducers (for example, loudspeakers). It defines the parameters and measurement method to determine the properties of suspension parts like spiders, surrounds, diaphragms or cones before being assembled in the transducer. The measurement results are needed for engineering design purposes and for quality control. Furthermore, this method is intended to improve the correlation of measurements between suspension-part manufacturers and loudspeaker manufacturers.

The measurement methods provide parameters based on linear and nonlinear modelling of the suspension part and uses both static and dynamic techniques.

### **2 Normative references**

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
